

SPENCER CAPPIELLO

portfolio deck

Led by constant curiosity, Spencer is a full stack creative developer who plays with data, patterns and the latest technologies for artistic installations and commercial applications.

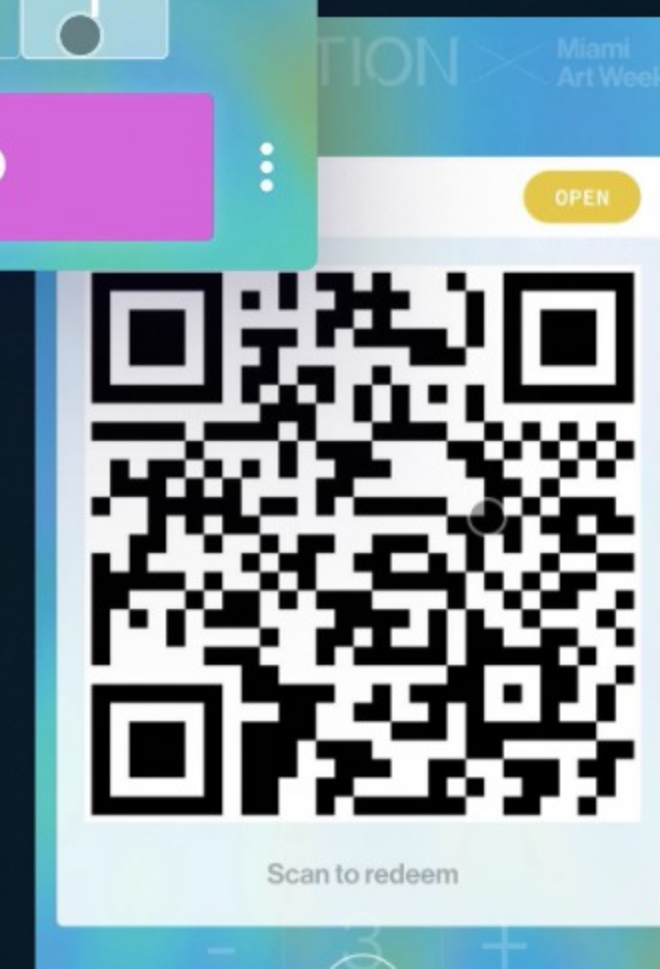

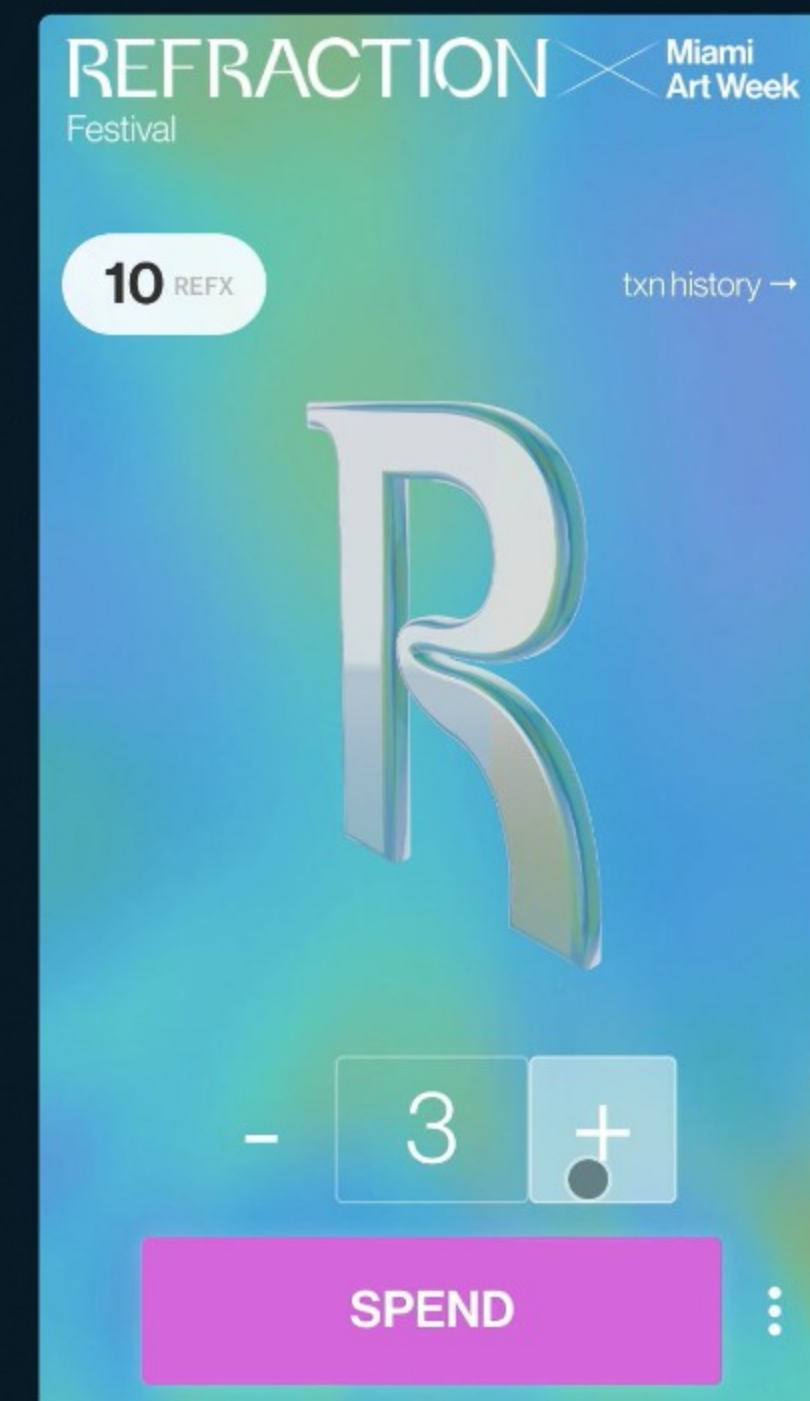

Fascinated by things almost invisible to us – sound waves, pixel arrays or the hive mind phenomenon – Spencer takes inspiration from nature and energy at the micro scale. By blending fabrication and coding, he constructs dynamic, real-time light and sound installations that subvert traditional perspectives.

In addition to his artistic practice, Spencer employs his technical skills to design and develop memorable interactions for clients that span URL to IRL (and back). From web shops and novel payment systems to immersive storytelling, Spencer delivers efficient digital solutions for the unique needs of the project at hand.

Above all, Spencer measures success when technology feels like magic.

3D web design + development
for San Francisco nightlife venue

A large, leafy tree dominates the left side of the frame. Several colorful triangular lanterns are hanging from its branches. The lanterns are in shades of orange, red, and blue. In the background, a path leads through a wooded area, and a small pond is visible. The scene is bathed in warm, golden light, suggesting late afternoon or early evening.
